

Calian GNSS Environmental Policy

At Calian GNSS we provide innovative Radio Frequency and Antenna products, and we prevent pollution and continually improve the environmental impacts from our operations by following these principles:

1. Clearly identify and comply with applicable environmental legislation and regulations and with our customers' environmental requirements.
2. Ensure all employees understand the environmental impacts of their work and how to improve them.
3. Maintain environmental discipline through our internal Calian Operating System (COPS).

Environmental Protection

Following our environmental policy, we have taken great steps in the last year to improve our environmental management systems. As a company, we aim to deliver high quality products while doing our part to minimize our environmental footprint. To achieve this, we have increased our electronic waste recycling and are actively moving towards less plastic packaging to ensure we divert as much waste as possible from landfills.

In addition to our company initiatives, we also strive to meet with global sustainability initiatives such as the United Nations [Sustainable Development Goals](#) (SDG). Specifically, we are in line with [SDG 12 – Responsible Consumption and Production](#).

By 2020, achieve the environmentally sound management of chemicals and all wastes throughout their life cycle, in accordance with agreed international frameworks, and significantly reduce their release to air, water, and soil to minimize their adverse impacts on human health and the environment.

By 2030, substantially reduce waste generation through prevention, reduction, recycling and reuse.

Encourage companies, especially large and transnational companies, to adopt sustainable practices and to integrate sustainability information into their reporting cycle.

Chemical Composition Control

- Sony Green Partner Certified manufacturer
- Upcoming ISO 14001:2015 certification
- RoHS and REACH-compliant products
- Supply chain transparency through Critical and Extended Minerals reporting
